

Example 2 - Work Related assignment

Researching and developing project based assignments set by an employer.

Note: This project is set and led by an employer.

On completion learners will present their findings to the employer.

The learner will engage and communicate with the employer in all matters arising from the project.

The project will involve;

- Planning for employment in the engineering industry.
- Identify the main ways to find out about job vacancies in engineering
- Identify what types of qualities employers are looking for when recruiting
- Identify the main stages of the recruitment process
- Identify the main ways of presenting information to employers
- Collect job vacancy advertisements from different sources
- Write a job vacancy for your own company.
- Investigate the recruitment procedure used at your company.
- Investigate how job advertisements are written in your company and who is responsible for preparing them.
- Investigate the process your company use to publish the advertisement.
- Prepare and present your findings

The project will be completed during Work Experience / Work Related Learning aspect of the program.
